Introducing the **Advanced Ultra Sensitive Bicycle Counter System** specifically designed for detecting bicycles on dedicated bicycle paths.

Key features:

- Bidirectional counting;
- Will count for two weeks before recharge;
- Light but robust casing;
- Simple and secure mounting system; and,
- On board Bluetooth modem for easy data download.

Advantages:

- Ideal for rural, rugged areas;
- Low installation, operational and maintenance costs;
- Long battery life; and,
- Permanent or portable counter models available.

Applications:

- On board memory of 2MB (=430000 bikes);
- Radar sensor that works in all weathers;
- Simple desktop analysing software that produces a variety of reporting styles;
- Data that shows date, time, speed and number of bicycles (people);
- A permanent counting solution by solar solution or mains attachment;
- Data can be downloaded by any MS Windows 6.6 enabled PDA type phone which can also be supplied; and,
- Can be supplied with a temperature sensor.
